Have you ever wondered what a project would look like before you ever started it ? If so, then we have the answer for you.

What we do:

Provide realistic renderings for:

- **Office Buildings, Shopping Centers, and any other type of commercial building.** Once your design is finalized, we have the staff to provide drawings for any project.
- **New Homes.** If you want to build your dream home and see what it is going to look like before you finish, we can show you and then draw the plans from the rendering.
- **Decks.** If you want to add on or remodel your home's deck to entertain more friends and family, then we can show you what it's going to look like and have it built for you.
- **Renovations.** If you want to update your kitchen, bathroom, or any other part of your home, we can show you and then help create a set of drawings so a contractor can build what you see.

Bring us your sketches, photos, or any example of your ideas and we will create a 3D representation allowing you to visualize the final product.

We are based in Charlotte, North Carolina, and are able to serve our clients in this area on a face-to-face basis, but we're not limited to where our next project will take us. Our website will continue to grow so please visit often and if you think we can help build your world in 3D, e-mail us and we'll see what we can do for you.

Please contact us to discuss how we can help your idea become a virtual reality.
